

Commander® OneStream VPN

Whether you are a single site company or a large corporation, the necessity to communicate in a secure and reliable environment is crucial to your daily business operations. Commander's OneStream Virtual Private Network (VPN) delivers a secure and reliable network to support all your current and future communications requirements.

Commander's OneStream VPN provides the infrastructure to enable your business to support IP based communications and delivers application Quality of Service (QoS) requirements for all business needs. Whether you want to link several offices together or create a national Internet Protocol (IP) infrastructure for all your applications, OneStream VPN can deliver on every scale.

OneStream VPN is ideal for organisations:

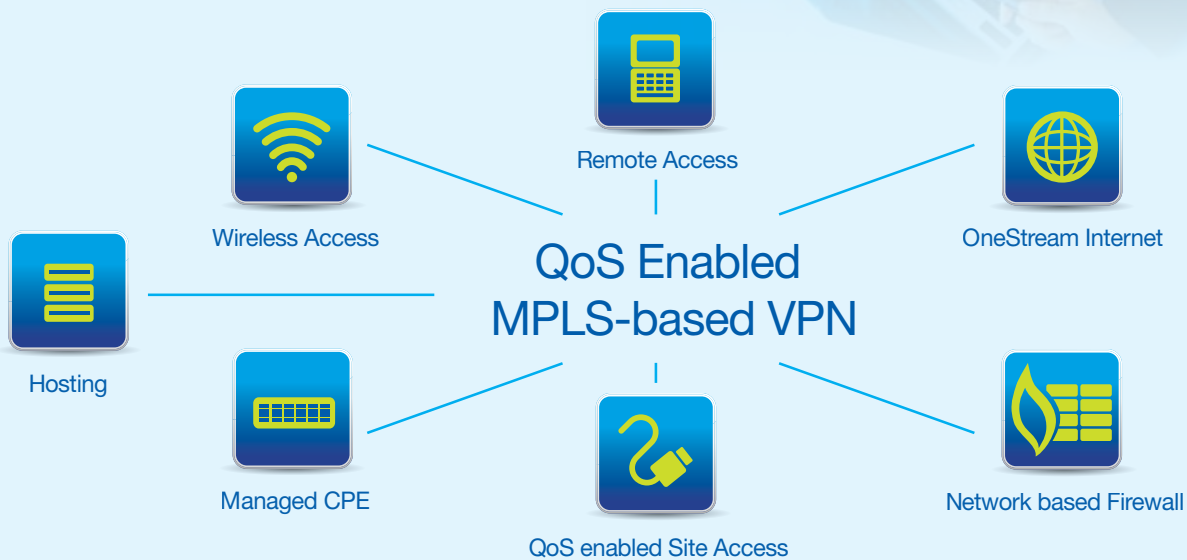

- > Looking to reduce their inter-office voice, video and data communications expenses.
- > Seeking secure business systems transparency between all offices.
- > Wanting to offer workers more flexibility and out-of-office productivity.
- > Wishing to share resources and applications with their suppliers and customers.
- > Requiring comprehensive visibility of their entire communications and data network infrastructure.

How does it work?

OneStream VPN maximises MPLS technology to provide VPN and Internet products which scale from a simple unmanaged Broadband Internet service, to a national 1000+ site managed VPN with a mixture of Ethernet, Leased Line, Digital Subscriber Lines (DSL) and Wireless with QoS where appropriate.

The OneStream VPN focuses directly on the customer's key business drivers as well as their desire for ease of ownership.

VPN key features:

- > **Common infrastructure** supporting Internet and VPN services for full portfolio consistency.
- > **Flexible service** and performance levels to meet a variety of customer price points.
- > **Clearly defined**, tiered product structure to support entry level requirements through to high-end customised data network solutions. Data solutions are delivered across a common architecture and support infrastructure.
- > **National coverage** ensures your offices can access your corporate network services and business applications.
- > **Quality of Service (QoS)** tailored to your specific business requirements.
- > **Performance reports** providing visibility of what is happening across your entire business infrastructure.
- > **Peace of mind** with detailed Service Level Agreements (SLAs).

Key benefits of OneStream VPN:

- > Increased business productivity
- > Reduced systems operational expenses
- > Improved customer service
- > Greater workforce mobility
- > Converged communications
- > Full network visibility

Commander OneStream solutions come with the peace of mind of 24/7 national support, ensuring we're there when you need us most.
